\* Presale Allocation - is our max amount of tokens available for presale. Should not all tokens be purchased during the event, remaining tokens will contribute to our Ecosystem Vault quantity.

\* Ecosystem vault - % and total distribution is calculated by the remaining tokens not distributed elsewhere. The actual amount can increase, from remaining tokens not sold in presale and possibly less liquidity raised for MAGIC LP. These tokens will be used to strategically address inflation, expansion, and more.

\* Liquidity - is determined by funds raised during presale. What is reflected is how much liquidity we can allocate with a fully funded presale. Please see our presale fund distribution below.

## **Taxes - Updated**

Taxes are never an enjoyable feature as a retail investor. But in order to provide an asset that is able to grow in quantity while

you hold, a feature that mitigates monetary position loss during downward price action, the issue of cascading inflation is introduced (i.e. OHM tokenomics). Therefore, to address the resulting issue of inflation, taxes of various fashions and distributions have been introduced to try and find a way to rebalance circulating supply growth into the areas to stabilize price. And truly, which would you prefer: an investment flip that gives you only a one time payout of \$10,000, or an investment that pays you an average \$100 a day, after taxes, week after week.
